GMT World Time Calculator: how it is put together

sketched from the files

GMT World Time Calculator: the run, step by step

If a step fails, the honest run says so and stops.

traced, not guessed, GK

Product map: what GMT World Time Calculator is for

WHAT IT IS

A small project in Python, Markdown. The README and the files are the whole claim.

WHAT GOES IN

The files at the top of the tree: oi_time.py, README.md, LICENSE.

WHAT COMES OUT

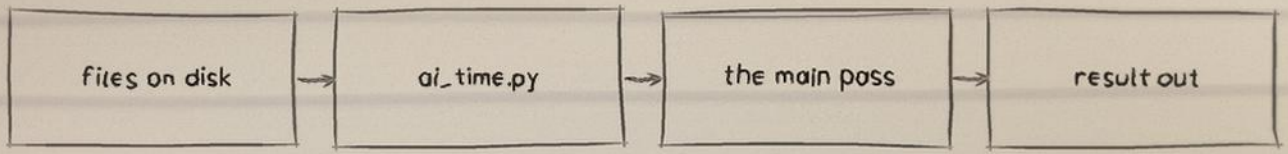

What the top files produce when they run or get read. Nothing else is promised.

WHERE IT STOPS

No service behind it, no account, no upload. If a path is untested, VISUAL.md says so.

mapped by hand, GK

GMT World Time Calculator: data flow, in one direction

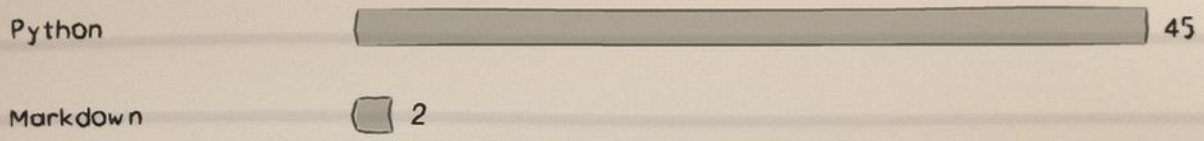

One direction. Anything the code does not do is not drawn.

second sheet, GK

GMT World Time Calculator in numbers, counted 2026-10-30

Counted from the local snapshot of this repo. Method for every number: VISUAL.md.

3 files in the tree.
5 commits, first 2023-02-11, last 2023-02-11, from the local git log.
No test files by name in this snapshot.

counted and drawn, GK

GMT World Time Calculator: schematic of the apparatus

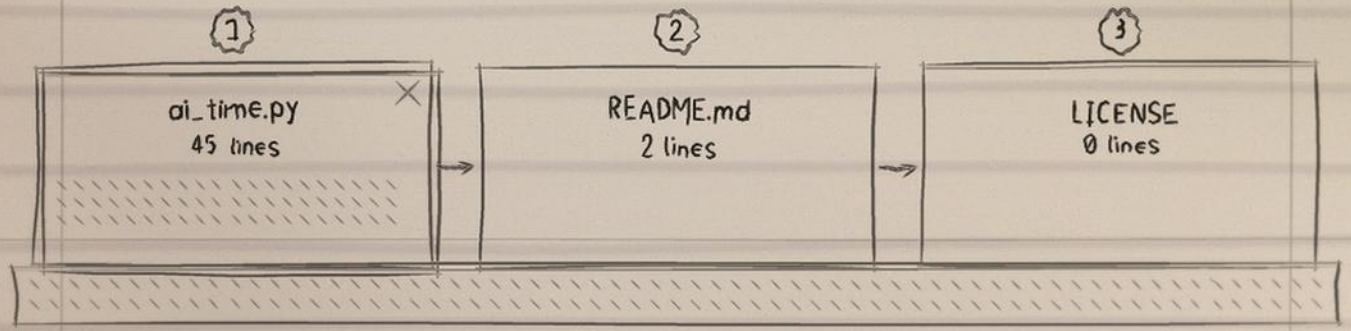

the system as a machine: parts, flow, and measurements

construction lines left in, as drawn

parts list

1. ai_time.py
2. README.md
3. LICENSE

in flow order, first to last

base plate: the repo itself, sectioned

span: 3 files, 47 lines counted

turns of the crank so far: 5 commits, 2023-02-11 to 2023-02-11

measured and sketched, GK
